Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-21(Canceled).

22. (Currently Amended) A method comprising making a current collector for a fuel cell comprising coating an electrically conductive substrate with a tacky layer of uncurred or undried material comprising a corrosion-proof, electrically-conductive filler dispersed throughout an oxidation-resistant and acid-resistant polymer, thereafter embedding a plurality of electrically-conductive particles in a surface of said layer so as to increase the conductivity of said surface over the conductivity of the remainder of said material, and thereafter curing or drying said layer.

- 23. (Previously presented) A method according to claim 22 wherein the embedding comprising spraying said particles onto said surface at a pressure greater than 40 psi.
- 24. (Previously presented) A method according to claim 22 further comprising molding said electrically conductive substrate from a composite material comprising corrosionproof, electrically-conductive filler dispersed throughout an oxidation-resistant and acidresistant, water-insoluble polymer.
- (Original) A method according to claim 22 wherein said substrate comprises a metal.

Attorney Docket No. GP-301597

US Serial No. 10/770,876 Amendment and Response dated August 30, 2007 Reply to Office Action mailed May 30, 2007

26- 30 (Canceled).

31. (Previously presented) A method as set forth in claim 22 wherein the particles

comprise at least one of gold, platinum, palladium, rhodium, ruthenium, or rare earth metals.

32. (Previously presented). A method as set forth in claim 22 wherein the particles

comprise conductive carbon.

(Previously presented) A method as set forth in claim 22 wherein the particles

are present in a higher concentration at the surface than the remainder of the composite.

34. (Previously presented) A method as set forth in claim 22 wherein the embedding

comprises spraying said particles onto the surface of the layer at a pressure greater than 40 psi.

35. (Previously presented) A method as set forth in claim 22 further comprising

placing a diffusion media adjacent the collector so that the contact resistance between the

diffusion media and collector is reduced by the increased conductivity of the surface.

36. (Previously presented) A method as set forth in claim 35 further comprising

placing a membrane electrode assembly adjacent the diffusion media.
